## Projects

### Module 1 Portfolio Website

#### Details

This project is a personal portfolio website developed using Python, Flask, HTML, and CSS. The website includes a biography, contact information, and a projects page showcasing my work. It demonstrates the fundamentals of web development, including Flask routing, HTML templates, navigation, styling with CSS, and organizing static content.

The screenshot shows the GitHub web interface for the repository 'jhu\_software\_concepts'. The left sidebar displays the file explorer with the 'module\_1' directory selected. The main content area shows the README.md file for the 'wedsnesday331' branch. The README includes a description of the project as a personal portfolio website, lists requirements (Python 3.8 or later, Flask, HTML, and CSS), and provides installation instructions.
